Chapter: 1 (computer)

A computer is a general purpose device that can be programmed to carry out a set of arithmetic or logical operations automatically. Since a sequence of operations can be readily changed, the computer can solve more than one kind of problem.

Conventionally, a computer consists of at least one processing element, typically a central processing unit (CPU), and some form of memory. the processing element carries out arithmetic and logic operations, and a sequencing and control unit can change the order of operations in response to stored information

Chapter: 2 (monitor)

A monitor or a display is an electronic visual display for computer .The monitor comprises the display device, circuitry and an enclosure.

The display device in modern monitors is typically a thin film transistor liquid crystal display (TRFT-LCD)thin panel, while older monitors used a cathode ray tube (CRT) about as deep as the screen size.

Originally, computer monitors were used for data processing while television receivers were used for entertainment. onwards, computer (and their monitors) have been used for both data processing and entertainment, while television.

Chapter: 3 (keyboard)

In computing, a keyboard is a typewriter-style device, which uses an arrangement of buttons or keys, to act as mechanical levers or electronic switches. Following the decline of punch cards and paper tape, interaction via tele printer-style keyboard's became the main input device for computers.

A keyboard typically characters engraved or printed on the keys and each press of a key typically corresponds to a single written symbol. However, to produce some symbols requires pressing and holding several keys simultaneously or in sequence.

Chapter: 4 (mouse)

In computing, a mouse is a pointing device that detects two-dimensional motion relative to a surface. This motion is typically translated into the motion of a pointer on a display. Which allows for fine control of a graphical user user interface.

Physically, a mouse consists of an object held in one's hand, with one or more buttons .mice often also feature other elements, such as touch surfaces and "wheels", which enable additional control and dimensional input. A mouse typically controls the motion
